

European eSignature

eSignature software solutions issue a signed and encrypted document from a sender, transport it via a secure communications channel, present it to the signer(s), record the signer's actions, re-encrypt the document, and return it to the originator via secure communications.

IDC's *European eSignature* focuses on European esignature market dynamics, end-user insights, market players, and market outlook. The service is designed to help esignature market players, trust service providers, content management software and service providers, and partners better understand workflow automation drivers and changing market dynamics — including legislation, new market opportunities, and competitive landscape — in a fragmented European market.

MARKETS AND SUBJECTS ANALYZED

- eSignature competitive landscape
- eSignature end-user insights
- eSignature market trends
- eSignature market outlook

CORE RESEARCH

- European eSignature Overview Market Perspective
- European eSignature Outlook
- European eSignature End-User Insights Survey
- European eSignature Competitive Landscape

In addition to the insight provided in this service, IDC may conduct research on specific topics or emerging market segments via research offerings that require additional IDC funding and client investment.
